

INSTALLATION INSTRUCTION

Please read the manual and the best state for the machine performance after reset.

1. wiring explaining

- ① connect the deflection line to XS 402
- ② insert the disappear in the magnetism line to XS 501
- ③ connect the speaker line to XS 601. XS602 socket
- ④ connect the front panel to the XS 702 socket
- ⑤ connect the TV tube earth line to the K9N2 of the CRT socket

25' - 29'

2. Distinguish DY: general situation, horizontal DY resistance is under 2.5ohm, vertical DY resistance is beyond 5ohm, judge DY according to this.

3. horizontal DY wiring method: first of all, measure the DY resistance, divide four range,

- ① 1.2ohm - 1.7ohm connect the four line of the deflection line to KY socket, adjust the resistance RP301 or RP302 if the width of the picture is not normal, adjust the resistance of RP301 and RP302.
- ② 0.6ohm - 1.1ohm cut the red line of the deflection line, insert in T2, connect the other three line to 2. 3. 4. of the XS402. increase the capacitor C441, it can be increased to 0.8UF - 1UF, then adjust RP301. RP302.
- ③ beyond 1.8ohm cut the red line of the horizontal DY, then connect it to T1, if the width of the picture is not normal, increase the capacitor C436, or reduce C441, then adjust RP301. RP302.
- ④ under 0.6ohm change it to series, measure its resistance, confirm it belongs to which range then connect it according to the method above.

4. vertical DY wiring method

25' - 34', vertical DY resistance is between 4ohm - 15ohm. needn't change, connect the DY to 3. 4. of the KY socket directly. if the picture upside down, exchange the 3. 4. in the length of the picture is not normal, adjust the data of V - SILE, or change the resistance of R459.

14' - 21'

2. distinguish DY: general situation, horizontal DY resistance is below 3.5ohm, vertical DY resistance is beyond 6ohm, judge DY according to this.

3. horizontal DY wiring method: first of all, measure the DY resistance, divide four range,

- ① when the resistance is between 2ohm - 2.2ohm, insert it to the 1.2of the XS 402.
- ② when the resistance is between 2.2ohm - 3ohm, connect the red line of the deflection line to T10, then adjust the capacitor of C441, then connect other three lines to XS402.
- ③ when the resistance is between 1.7ohm - 2.2ohm, connect the red line of the deflection line to T9, at the same time increase the capacitor of C441 to 0.39 - 1UF.
- ④ When the resistance is below 1.5ohm, change the DY to series, measure its resistance, connect it right, if the width is too much, increase C441, then series the inductor.

4. vertical DY wiring method: when its resistance is between 8ohm - 15ohm, connect it to 3. 4. of DY socket, if it is 30 - 60ohm, change the DY to shunt.

5. if the vertical length if still abnormal after adjusting the machine, adjust the resistance R451 (3.9 - 6.8K), R459 (0.5OHM - 2.5OHM)

6. check the ground cable, deflection cable, high voltage cable before start the machine.

7. if the picture appears □ or □, try three methods blow: ① change DY ② change the board contains the fourth adjust ③ increase the capacitor C438

8. if appears audio, characters, black curtain, white curtain or cross, adjust the data of B/W = 0

9. if the raster is not normal, change the positive pole and negative pole of L441.

10. if opposite the DY, LA7840. LA7840. R550. R460. V432. V513. V512 will be destroyed, pls check it.

11. luminance is low or the picture tube wears out, try ① reduce the resistance of R491 ② at the same time, increase the resistance of release tube (15kohm - 18kohm) ③ reduce the resistance of the three release tube (200ohm - 300ohm) ④ reduce r931 to 220ohm - 680ohm.

12. if raster is abnormal ① adjust MENU 3"IC. select" to LA76810/76818. ② check the voltage 21' 110v25' 130v, confirm it not be high of low. ③ check N551 AN7809 if it is ok.

13. the indicator lamp is on, no high voltage. check the 2.3of FBT.

14. if the screen appears vertical line. adjust the "ADJUST MENU" "HPOS1" and "ADJUST MENU" "HBLD LEFT" and "HBLK RIGHT". if the curtain can not cover the whole, adjust the data of SCR HPOS1.

15. if the tv tube is Panasonic, Beijing Panasonic or sharp, it will appears □, that is the problem of DY, .

16. start the machine, if electric capacitor C444 generate heat or bomb and split, that is because ground cable of tv tube and TNU connected, the resistance between them should be 200k.

17. if the length of the picture is two much, check the resistance of DY if it is two high.

18. for loudspeaker, use 8ohm. 3w.

ATTENTION: before installation, check tv tube, before start the machine, check if the ground cable connect the KYM of the CTT, if not, LA7681X OR LCB8633XX will be destroyed.

Operating instruction

Preset the program

Under the state of "TV", press the key of "menu" on the board or the remote controller before pressing repeatedly, it make display "preset it" accuse of at the time of project or not at remote controller for board before pressing "program +/-" it chooses "full-automatic to search for" to be or the "semi-automatic to search for" to key. "finely tune", accuse of board or at the remote controller before pressing again "volume +/-" key can go on corresponding function operate it.

Choose the program

Before it press it accuse of program or not at remote controller for board "+-key, can choose by program in proper order, can have pressed by numerical keyed in remote controller too and: -/-" The key goes on to select the platform directly

Adjust volume

According to before accuse of by board or not at remote controller "volume +/-" can size against volume regulate going on

Function of the game

Accuse of the key of "menu" on the board or the remote controller before pressing repeatedly, make the screen show "function", press "program +/-" key can choose "1 game" or "2 game", press "volume +/-" the key can enter the state of the game, press and then "volume +/-" key can carry on game, press and "recall" the key can be "delayed" or "resumed", equally, can begin another game. Press and "it is apparent to reject" the key and can return and go on a tour the play.

Time function

Accuse of board or "menu" key at the remote controller before pressing repeatedly, make the display "time" project, with "program +/-" key choose "clock" "time of starting the machine" "unused time", etc.. With "volume +/-" last time adjustment about hour, with "volume-" key adjust about minute, get time that you set for will carry out the corresponding function. Should pay attention to it only after establishing "clock" one, every other ability is set up, exchange all time after old trick to set up and cancel.

Electronic calendar

Accuse of board or "menu" key at the remote controller before pressing repeatedly, make the display "function" project, it press "program +/-" key, choose "calendar" of project of, press "volume +/-" key, enter calendar, calendar, etc. and show the state. Press "program +/-" key choose year calendar or calendar or calendar leafed through to want, press "volume +/-" key to annual, moon, calendar leaf through.

Function of the video

Accuse of board or remote controller "TV / video" enter "video" state, can use for showing VCD before pressing, video programs, such as video, etc., press the key of "system" under the state of the video, can change the colored rule directly

Scale function

Press this key, can make the fax enlarge. Ordinary. Narrow and change between three states.

Result key Press key this, can make fax in "memory, standard". Soft, gorgeous, bright to "change between five kinds of states.

LC8633XX LA76818ADJUSTMENT INSTRUCTION

1. the method to get to "FACTORY":

① get to "FACTORY" by remote controller: adjust the volum = 0, press "MENU" when appears "Picture", in OSD state, press 6568 equal to "PROD"

② conversion method: press "SLEEP", you can convert it in the: FACTORY, B/W BALANCE, ADJUST, press "REVIEW" to normal state.

2. when in "FACTORY" state, press "PICTURE" for 7 seconds, you can set it, press program + - to choose adjustment, "RESULT" to move cursors, "VOLUME + -" to choose the content.

LOGO1	ON. OF	SIZE	2 x 2
H · POS	20	COLOR	RED
V · POS	30		
LOGO2	ON. OF	SIZE	2 x 2
H · POS	20	COLOR	RED
V · POS	30		

3. According to 1, enter into B/W BLANCE

OSD			OSD		
S - BRI	70	0 ~ 127	C. B/W	0	0 ~ 3
B - DRV	60	0 ~ 127	B - BIA	13	0 ~ 255
